Dear Sir:

**AMENDMENT IN THE CLAIMS:**

Claims 1-17 (cancelled)

Claim 18 (previously amended): A device for carrying, cutting and scoring rolled insulation having a thick fibrous layer adherent to a thin flexible substrate, comprising:

a dolly comprising two handles and a carriage, wherein said handles also function as feet when lowered to the ground, wherein said carriage receives rolled insulation, wherein insulation issues from said rolled insulation in said carriage;

a cutting groove, substantially linear, having length greater than or equal to the width of said insulation, and spatially fixed relative to said carriage, wherein a first portion of said insulation is placed adjacent to said cutting groove;

a scoring groove, substantially parallel to and substantially the same length as said cutting groove, wherein a second portion of said insulation is placed adjacent to said scoring groove;
